ABSTRACT

Background: Teenagers are the future generation they are the fate decider of the nation in the future. If teens inferior quality, it will result in the destruction of the nation. When many teens are damaged and not qualified will have an impact on the future. The purpose of this research is to determine the relationship between adolescent knowledge about HIV/AIDS with sexual behavior of teenagers in SMK Kesehatan Pinisi Bulukumba Year of 2013.

Method: Research design is descriptive analytic with cross sectional approach. This research was conducted in August 2013 at SMK kesehatan Pinisi Bulukumba. The population that will be used in this study were all students of SMK Kesehatan Pinisi Bulukumba in 2013, amounting to 46 people with purposive sampling technique, the total sample of 46 respondents obtained by using questionnaire.

Results: The result showed that more than a majority of respondents with good knowledge as many as 26 people (56.5%) respondents, and adolescent sexual behavior more than the majority of respondents have a negative sexual behavior as many as 30 people (65.2%) of respondents. Based on the statistical test using Chi-Square test value of $p(0.000) < \alpha = 0.05$, which means that there is a relationship between adolescent knowledge about HIV/AIDS with sexual behavior in adolescents in SMK Kesehatan Pinisi Bulukumba Year of 2013. It is suggested further research in order to take some other variables outside of the study variables if it will do research on sexual behavior in adolescents, in order to know what factors that can affect sexual behavior in adolescents.

Keywords: knowledge, sexual behavior of teenagers
